EPiTEK SOLUTIONS

Epitex Solutions
Defense, aviation and mission-technology integration

Website Architecture and Optimization Blueprint

epitexsolution.africa - East Africa defense and aviation technology integrator

Prepared for	Epitex Solutions leadership
Email	contact@epitexsolution.africa
Document ID	EPX-WEB-001
Version	1.0 (draft for review)
Status	Draft for management review
Date	2026-11-02
Issued	2026-11-02

DRAFT

Prepared for Epitex Solutions | Confidential - for the named recipient only. Not for onward distribution without permission.

1. Executive Summary

This blueprint defines the architecture, content hierarchy and technical optimization strategy for **epitexsolution.africa**. Epitex Solutions acts as the regional distributor, system integrator and lifecycle maintainer in East Africa for Tier-1 defense, aerospace and high-technology manufacturers. The regional footprint is anchored on STM (Savunma Teknolojileri Mühendislik ve Ticaret A.Ş.).

The website must position Epitex Solutions as the regional engineering backbone, not a commercial broker. It must show that Epitex can deploy, maintain and support autonomous systems, naval technologies, cyber intelligence and mission software for sovereign defense agencies and civil authorities.

Item	Detail
Domain	epitexsolution.africa
Pages in scope	5 (Home, Distributor and Integrator Hub, Partnerships, Services, Contact)
Audience	Ministries of defense, air forces, civil aviation and border authorities, procurement officers
Primary conversion	Technical demo request and category-specific briefings
Territories	Kenya, Uganda, Tanzania, Rwanda, Ethiopia
Optimization tracks	SEO, Generative Engine Optimization (GEO), Conversion Tool Optimization (CTO)

1.1 Items to verify before publishing

Several statements in the source brief are claims that need evidence before they go live. They are tagged **[V]** in this document.

Tag	Meaning
[A]	Approved baseline
[P]	Proposed content or design
[V]	Factual claim to be verified with evidence before publication

Ref	Claim to verify	Why it matters
V-1	"Authorized regional partner" and "authorized distributor" status for STM	Needs a signed agreement or written authorization. Misstating it is a legal and reputational risk.
V-2	Source link st-modelisation.fr	That domain belongs to a French company, ST Modélisation, which is not the Turkish defense company STM. Use the correct STM source (stm.com.tr) and confirm with STM.
V-3	99.9% operational uptime target	Needs a defined measurement basis, or should be reworded as a service objective.
V-4	ISO 9001 and AS9100	State "aligned" only unless certificates are held. Show certificate numbers if certified.
V-5	Test beds, factory-trained engineers, field units	Must exist or be worded as planned capability.
V-6	FocusFlite deployed on 75+ platforms	Confirm the figure and wording with the manufacturer.
V-7	Brand spelling	The company name in this brief is Epitex, while the logo file reads EPiTEK. Confirm the final spelling for the site, logo and domain.

2. Brand and Visual Direction

The visual system follows the Epitex logo: a deep navy wordmark and a bright blue parallelogram carrying white lettering.

Element	Value	Use
Primary navy	`#294776`	Headings, navigation, footer, hero overlays
Accent blue	`#207EB0` (logo); `#3AA0D5` (lighter, for contrast on navy)	Buttons, links, highlights, section markers
White	`#FFFFFF`	Text on dark fills, card backgrounds
Navy tint	Navy at 10%	Table headers, card fills, alternating rows
Ink	`#1F2A27`	Body text

- Use the slanted parallelogram from the logo as a recurring shape for buttons, section tags and image masks.
- Use a geometric sans-serif for headings (the logo uses Century Gothic) and a neutral sans for body copy.

- Keep imagery technical and restrained: terrain overlays, flight vectors, schematic line work. Avoid stock military clichés.
- Every page carries a persistent domain switcher and a trust strip (see section 5.3).

3. Site Architecture

Page	URL	Purpose	Primary CTA
Home	`/`	Positioning, competencies, partner spotlight, metrics	Explore Capabilities
Distributor and Integrator Hub	`/distributor-integration`	Logistics, integration, sustainment, quality	Initiate SLA Consultation
Partnership and Representation	`/partnerships-stm`	Mandate, technology portfolio, joint execution	Request Tactical Data Sheet
Training, Services and Support	`/services`	Academies, 24/7 support desk, advisory	Initiate SLA Consultation
Contact and Demo Request	`/contact`	Secure enterprise inquiry and demo booking	Request Technical Demo

URLs stay short and readable, with no query-string noise. The domain switcher filters content across all pages by four operational domains: Air and Autonomous Systems, Aviation Software and Mission Planning, Cyber, C4ISR and Command Systems, and Integrated Support and Depot Maintenance.

4. Page-by-Page Content

4.1 Home Page (/)

Hero section. A high-impact technical visual with East African terrain overlays and autonomous flight vectors.

Element	Content
Headline	East Africa's Premier Defense and Aviation Technology Integrator
Subheadline	Bridging global aerospace defense innovations with sovereign East African operational requirements. Authorized regional partner for STM defense solutions. **[V-1]**
Primary button	Explore Capabilities
Secondary button	Request Technical Demo

Executive positioning statement. A direct narrative on Epitex's role in reducing supply chain delays, meeting sovereign security requirements and deploying NATO and ICAO-standardized hardware.

Core competencies matrix.

Competency	Description
End-to-End Procurement	Turnkey hardware and software acquisition that complies with national defense procurement frameworks
Systems Integration	Tactical data links, unified Command and Control (C2), and sensor-to-shooter integration into existing regional infrastructure
Standards Compliance	Adherence to ICAO, Eurocontrol and NATO-interoperable engineering parameters
Lifecycle Maintenance and MRO	Regional depot-level maintenance, field dispatch and a guaranteed spare parts pipeline

Strategic partner spotlight (STM). A visual module showing the tactical UAS platforms (KARGU, TOGAN, BOYGA, ALPAGU-B), the FocusFlite digital flight planning architecture and naval platform design.

Regional impact metrics.

Metric	Value	Status
Sovereign territories covered	5: Kenya, Uganda, Tanzania, Rwanda, Ethiopia	**[V]**
Operational uptime target	99.9% for deployed digital mission assets and communication relays	**[V-3]**
Field engineers	Locally stationed, factory-trained technical staff	**[V-5]**

Site footer. Operational address, emergency technical dispatch lines, sovereign procurement portals, compliance declarations and authenticated OEM partner links.

Confidential — for the named recipient only. Not for onward distribution without permission.

4.2 Distributor and Integrator Hub (/distributor-integration)

Section	Content
Regional distribution logistics	Frameworks for end-user monitoring, secure military transit, customs brokerage and clearance across East African Community (EAC) borders
System integration architecture	Methods for integrating imported hardware into domestic sovereign defense infrastructure
Lifecycle sustainment and in-country support	The Regional Maintenance Depot: spare parts warehousing, battery management for tactical UAS, scheduled mechanical overhauls and mobile engineering team deployment
Compliance, verification and quality control	ISO 9001 and AS9100-aligned processes, compliance tracking for military avionics and export controls **[V-4]**

Integration methods covered on this page:

- Sensor integration with regional air traffic and military radar nodes.
- Software-Defined Radio (SDR) and encrypted communication link configuration.
- Command post telemetry integration for real-time tactical observation.

4.3 Partnership and Representation (/partnerships-stm)

Authorized representation mandate. A statement of Epitex's designated authority as STM's primary integration and technical support vehicle across East Africa. Publish only once the authorization is documented. **[V-1] [V-2]**

Technology portfolio.

Domain	Systems and platforms	Primary operational applications
Tactical Autonomous Systems	KARGU, ALPAGU-B, TOGAN, BOYGA	Loitering strike munitions, GNSS-denied reconnaissance, precision mortar payload drop, asymmetric perimeter surveillance
Aviation and Mission Software	FocusFlite	Digital moving map, situational awareness, mission route planning, cockpit situational feeds, reported on 75+ platforms **[V-6]**
Command, Cyber and Naval	C4ISR, Naval Platform Engineering	Coastal surveillance, MİLGEM corvette integration, sovereign decision-support engines, hardened infrastructure cyber protection

Joint operational execution. Epitex's role in live firing demonstrations, localized payload adaptation for East African atmospheric profiles and sovereign operator training. Offensive-capability content on public pages should be reviewed against export-control and licensing rules before publication.

4.4 Training, Services and Support (/services)

Service	Scope
Tactical UAS Pilot Certification	Simulation and live flight training covering emergency recovery, payload management and swarm command
Avionics Maintenance Engineering	Line-replaceable unit (LRU) diagnostics, field sensor calibration and structural repair protocols
ICAO and Eurocontrol Compliance Modules	Training for air traffic coordinators and defense staff on shared airspace deconfliction
24/7 Technical Support Desk	SLA tiers with response windows; target of under 2 hours for Tier 1 critical mission platform failures
Technical Advisory and Defense Consulting	Needs analysis for ministries: border security perimeters, anti-poaching operations, maritime domain awareness

4.5 Contact and Demo Request (/contact)

4.5.0 Enterprise inquiry and demonstration form

Field group	Fields
Identity	Name, official title, verified sovereign or corporate organization
Technology interest	Tactical loitering munitions, reconnaissance UAS, FocusFlite avionics software, C4I infrastructure, custom maintenance contracts
Project	Operating environment, project timeline
Demo type	Virtual architecture review or in-country field demonstration

4.5.1 Regional node directory

Item	Detail
Regional headquarters	To be confirmed (address and map coordinates)
Technical support contact	To be confirmed (named person)
Primary secure inquiries	contact@epitexsolution.africa
Phone and encrypted email protocols	To be confirmed

5. Strategic and Technical Analysis

5.1 STM alignment

Capability	What it offers	East African application
Autonomous tactical drones (KARGU, TOGAN)	Onboard computer vision and edge-AI keep orientation, target acquisition and return-to-base when satellite navigation is jammed or degraded	Border patrol along complex boundaries and operations in dense or mountainous terrain
FocusFlite	Modular mission software providing situational awareness for rotary and fixed-wing platforms	Modernizing legacy cockpits in regional air forces without full airframe replacement, which lowers capital cost

5.2 Strategic takeaway for the web presence

The site must counter the perception that Epitex is only an intermediary. Content should repeatedly show local engineering validation: test beds, factory-trained software engineers and field deployment units able to deliver STM capability to regional procurement authorities. Each of these statements needs supporting evidence **[V-5]**.

5.3 Trust and verification anchors

- Compliance badges: ICAO interoperability, Eurocontrol alignment, ISO status and verified STM partner seal (only where substantiated).
- A dedicated Procurement Compliance notice covering sovereign acquisition rules, dual-use export authorizations and secure communications protocols.
- A persistent domain switcher on every page, with the four operational domains listed in section 3.

6. Technical Optimization Strategy

6.1 Search Engine Optimization (SEO)

Tier	Focus	Target keywords
Tier 1 Core	Brand and category	East Africa defense technology integrator; STM distributor Kenya East Africa; tactical UAV systems East Africa
Tier 2 Technical	Capability	ICAO compliant aviation integration Nairobi; FocusFlite tactical mission software East Africa; loitering munition supplier Africa
Tier 3 Institutional	Buyer need	Military UAV maintenance depot Kenya; border surveillance systems East Africa

Area	Requirement
URL structure	Clean directory hierarchy, for example `/partnerships-stm` and `/distributor-integration`
Structured data	JSON-LD for Organization, LocalBusiness and GovernmentService, covering legal entity, geographic service area and brand associations
Performance	WebP images, deferred CSS and JavaScript, static generation, Largest Contentful Paint under 1.2 seconds

6.2 Generative Engine Optimization (GEO)

The aim is reliable citation by AI platforms such as Gemini, Perplexity and ChatGPT.

Technique	Implementation
Entity coupling	Bind entities in schema and content: Epitex Solutions `isAuthorizedDistributorOf` STM, and Epitex Solutions `operatesWithin` Kenya, Uganda, Tanzania, Rwanda and Ethiopia (only once V-1 is confirmed)
Direct answer headers	Question headings with a short, factual answer paragraph beneath
Data density	Flat lists and tables with parseable specifications: mission ranges, payloads, operational standards

Example direct answer header: *Who is the authorized distributor and integrator of STM defense technology in East Africa?* Answer paragraph: Epitex Solutions is the authorized regional distributor, system integrator and maintenance provider for STM across East Africa, serving Kenya, Uganda, Tanzania, Rwanda and Ethiopia with direct lifecycle support. **[V-1]**

6.3 Conversion Tool Optimization (CTO) and UX

Product category	Contextual call to action
UAV platforms	Request Tactical Data Sheet
FocusFlite	Book Software Architecture Briefing
Maintenance services	Initiate SLA Consultation
General	Request Technical Demo

7. Implementation Plan

Phase	Work	Output	Owner	Target
1. Verify	Close items V-1 to V-7, confirm brand spelling	Verified claims register	Epitex leadership	To be agreed
2. Design	Brand kit, page templates, domain switcher, trust strip	Approved design system	Design lead	To be agreed
3. Content	Write and review all five pages, compliance notice	Approved copy	Content lead	To be agreed
4. Build	Static site, structured data, forms, analytics	Staging site	Web engineer	To be agreed
5. Optimize	SEO and GEO checks, speed testing, accessibility	Test report	Web engineer	To be agreed
6. Launch	Go-live, monitoring, first-month review	Live site	Epitex leadership	To be agreed

8. Acceptance Criteria

- Every **[V]** item is closed with evidence, or the related wording is removed or softened.
- All five pages are live at the URLs listed in section 3.
- Largest Contentful Paint is under 1.2 seconds on the test profile.
- Structured data validates without errors.
- The contact form reaches contact@epitexsolution.africa and the secure intake workflow.
- Colours and logo usage match the brand direction in section 2.
